Play using smartphone

Play using mouse

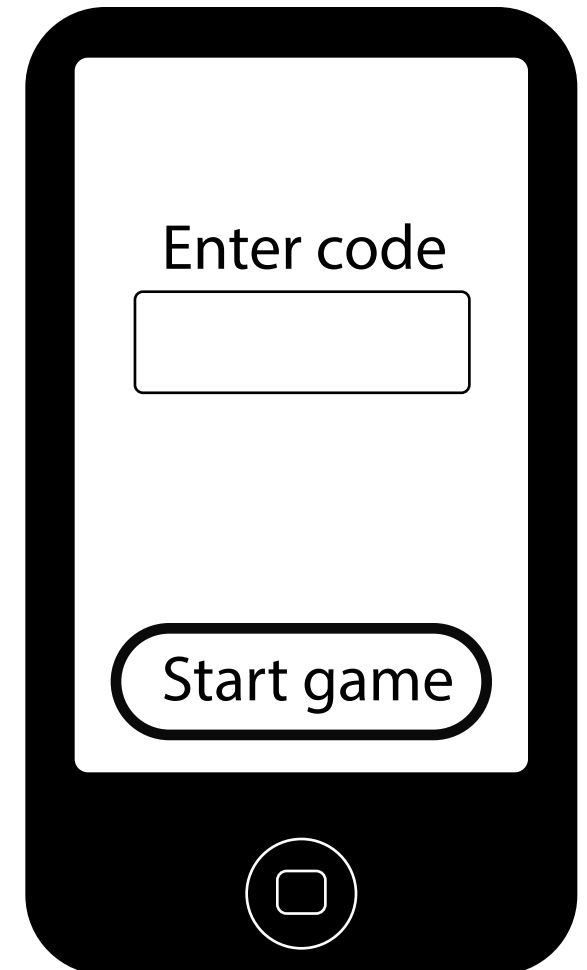

Should probably provide this option for non-smartphone people or syncs that fail

Instructions

Visit SITEURL.com and enter XXPHONECODEXX into your smartphone browser

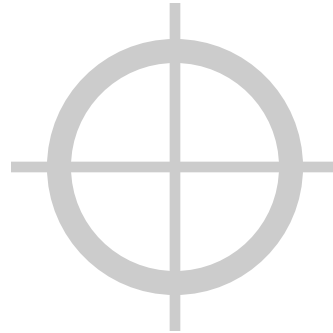

Note: I've seen a few games do this as part of the URL as well, ex: <http://url.com/XXPHONECODEXX>. We could go that route as well, use Backbone and pushstate to capture that URL and set up accordingly; just a bit more work on the server side

phone view

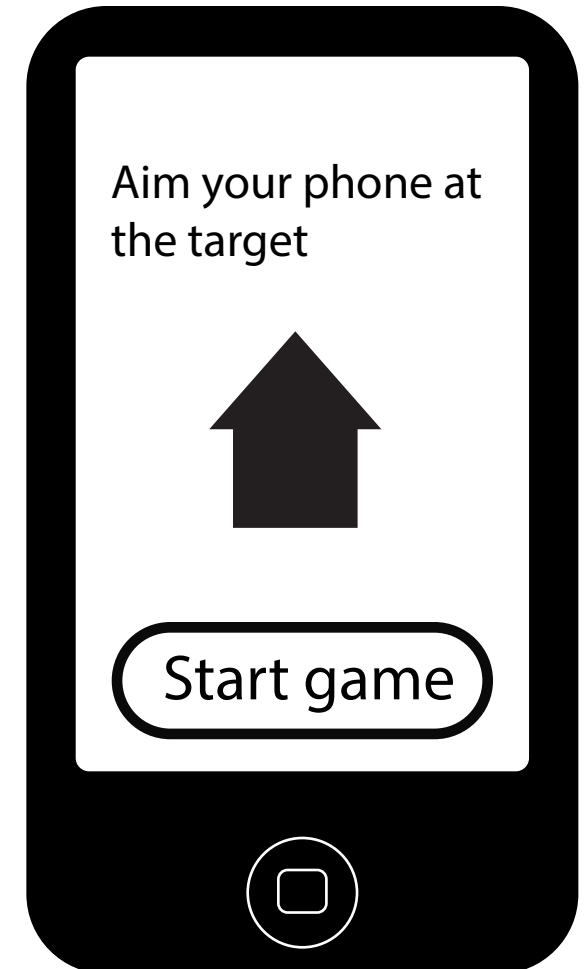

Calibration

Aim phone at middle of screen and press "Start game"
